

USER INTERFACE

Data Sheet

The Succorfish Software platform is a bespoke cloud-based software solution providing device management, data storage, analytics and mapping tools. Build with our customers, for our customers the software platform gives users secure access to their data any-time any-where given its optimisation for tablets and smart phones as well as desktops.

BENEFITS

Transparency – The platform uses a bespoke data surfacing approach that allows thousands of assets to be monitored simultaneously. Designed and developed by Succorfish, the software platform provides complete transparency for all Succorfish devices.

System Management – The platform operates as a fully configurable system with tiered-based access permissions to allow customers to decide the level of system management that best meets their needs.

Redundancy – The Succorfish platform is designed to be available, scalable and fully redundant. The Platform is ISO 27001 certified.

FEATURES
